Full Stack Developer

Description
Create two page application to maintain user information.

Listing Page
This page displays all users information using Datatable(ajax option) having following columns.
Show only 5 user records per page.

Name (FirstName LastName)
Email
Mobile
Age
Date of Birth - (Format : 31st May 2015)
Location
Action (Edit link should come for each user record)

Should also support adding new user (click on this should take to Add / Edit page)

Add / Edit Page
This page should support creating new user or updating existing user with following information.

First Name
Last Name
Email Id
Mobile
Age
Date of Birth - (Using date picker with dd/mm/yyyy format)
Location - (Using Google Places)
Make sure you handle necessary validations.

Submit button should be 'Add' in case of new user and 'Update' in case of existing user. Page should also have 'Cancel' button which will take to Listing Page. On click or Submit button send information to server using jQuery Ajax and go to listing page once server confirm the response back in json.

Technologies : HTML, CSS, Javascript, Python and MySql
Frameworks : Bootstrap, jQuery + jQuery UI, jQuery Datatable, Django, Google Places

Best of Luck :)
